

PAVILLION- VIVA LA CAFE

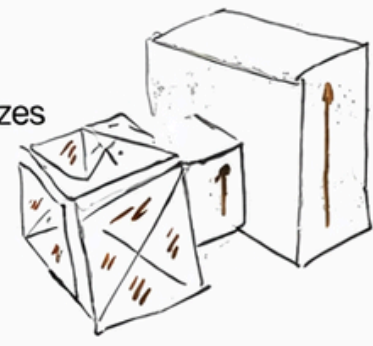

The first step into designing a pavilion was to do research on all 5 design principles: light, volume, rhythm, contrast and hierarchy

Open space, allows wind to pass through

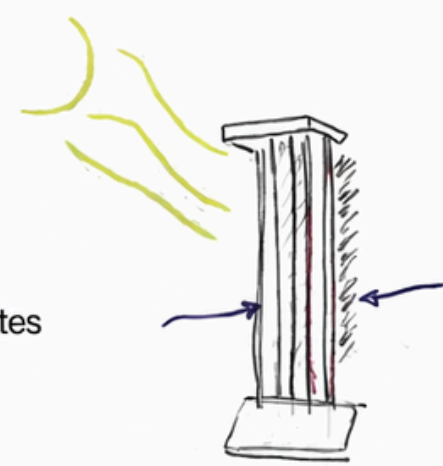

Open gaps to allow sunlight to come through

Contrast
Different sizes

Volume
Amount of space in building, it creates sense of feeling

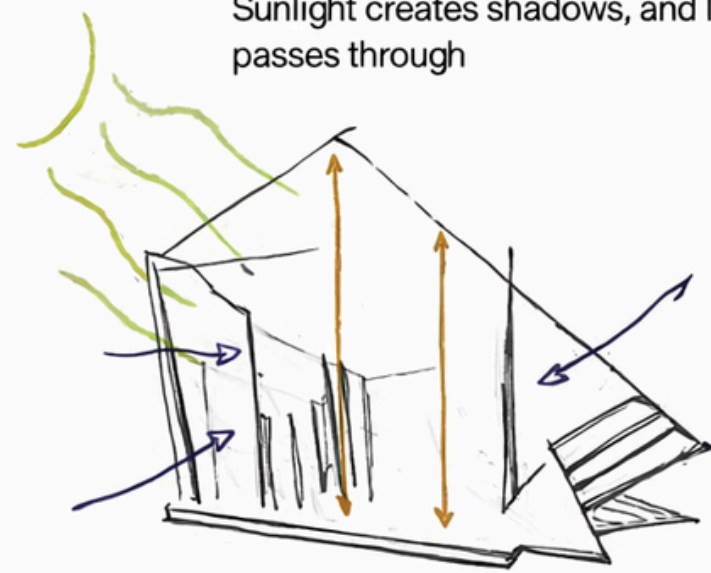

Wind passes through gaps

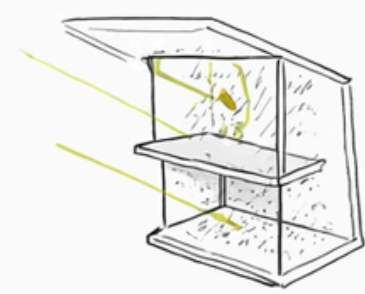

Pillars creates repetition

Sunlight passes through and creates shadows

Wind passes through gaps
Sunlight creates shadows, and light passes through

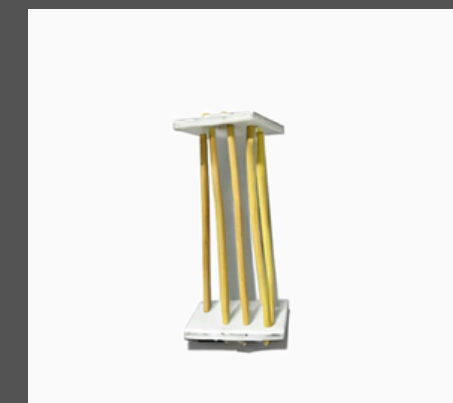

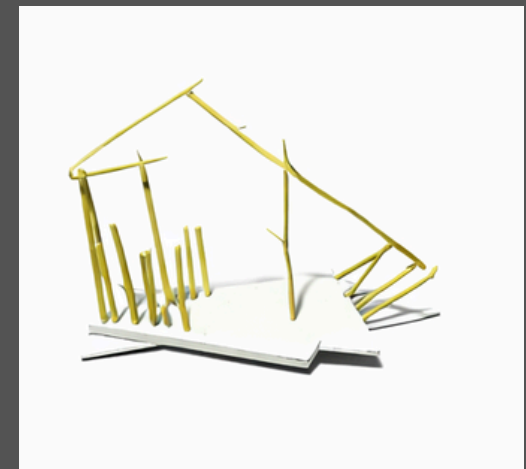

Volume
Creates depth and height of pavilion.
Different heights creates a sense of feeling
big=small
Small=claustrophobic

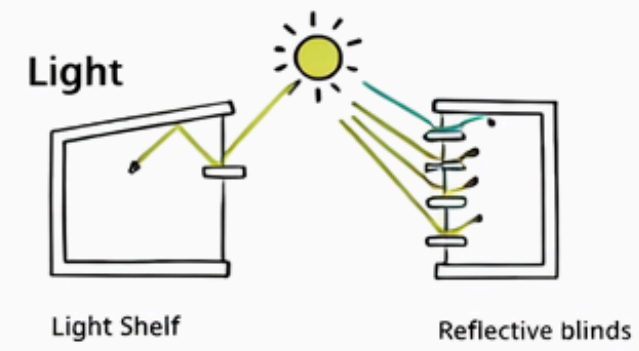

Allows sunlight to come through

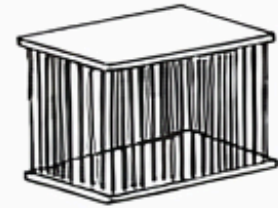

Light shelf
Horizontal light reflecting overhang It's placed above eye level

CONCEPT

Precedent

Pavillion of light

Rhythm

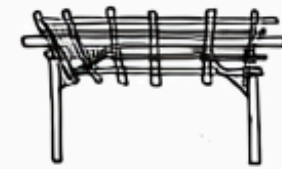

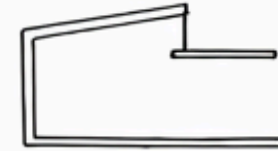

Regents place pavillion

Burscough Bench

Roof
